Common Residency Program Manual

University of Utah Health
Department of Pharmacy Services

Salt Lake City, Utah

2021-2022

Interim Chief Pharmacy Officer
Erin Fox, PharmD, BCPS, FASHP
Kavish Choudhary, PharmD, MS
Russell Ragsdale, RPh, MS

Residency Directors
Shantel Mullin, PharmD, BCPS – PGY1 Pharmacy
Karen Gunning, PharmD, BCACP, BCPS, FCCP – PGY2 Ambulatory Care Pharmacy
Teshia Sorensen, PharmD, BCPS, BCCCP – PGY2 Cardiology Pharmacy
Kathryn Disney, PharmD, MS, BCPS, BCCCP, – PGY2 Critical Care Pharmacy
Cole Sloan, PharmD, BCPS, BCGP – PGY2 Emergency Medicine Pharmacy
Kavish Choudhary, PharmD, MS – Health System Pharmacy Administration & Leadership
Russell Benefield, PharmD, BCPS-AQ-ID – PGY2 Infectious Disease Pharmacy
Dave Young, PharmD – PGY2 Internal Medicine Pharmacy
Erin Fox, PharmD, BCPS, FASHP – PGY2 Medication Use Safety & Policy
Stephanie Sanders, PharmD, BCOP – PGY2 Oncology Pharmacy
Dallas Moore, MS, RPh – PGY2 Pharmacy Informatics
Lonnie Smith, PharmD, FAST – PGY2 Solid Organ Transplant Pharmacy

Table of Contents

Recruitment and Selection of Residents

1. The Department shall participate in the Resident Matching Program of the American Society of Health-System Pharmacists **(ASHP**).

2. The Department shall participate in the Residency Program Showcase at the ASHP Midyear Clinical Meeting and may also conduct introductory interviews in the Personnel Placement Service (PPS).

3. At the ASHP Midyear Clinical Meeting, the Residency Program Director **(RPD)** or designee, current residents, and preceptors attending virtually or in person shall participate in the recruitment of candidates for the residency program, and address questions raised by candidates considering application to the program.

5. Those candidates who wish to be considered for an on-site interview shall submit an application, current curriculum vitae, college transcripts, and three letters of recommendation on standardized recommendation forms in PhORCAS by December 27th or date determined by the RPD which will be posted in PhORCAS. Candidates may be asked to participate in an introductory phone or video interview.

6. A standardized rubric will be used to assess all required components (e.g., letter of intent, 3 letters of recommendation, curriculum vitae, and transcript) of each application by at least 2 members of pharmacy staff. The average scores will be evaluated and the top scoring candidates reviewed in person by the recruitment team to ensure consistency in scoring and address any questions of suitability for the program. Communication and interpersonal skills are evaluated by current residents and preceptors in interactions before and during the resident selection process and are considered as part of the selection evaluation process. These can include, but are not limited to, interactions leading up to and during the Midyear meeting and social media. Top candidates are selected for interview based on average score.

7. In January, after evaluation of the information submitted by residency candidates, a sufficient number of candidates shall be invited for an on-site interview. If an on-site interview is not feasible, video interviews may be substituted.

8. The single-day interview shall include meeting with preceptors from each core practice area as well as the current program resident(s). Standardized behavior-based or value-based questions will be used to interview all candidates. Candidates are interviewed by organizational leaders, RPD, preceptors and residents.

9. After the interview process is completed, the interview groups shall meet to discuss and evaluate each candidate. Each group shall submit a single ordinal rank list of all candidates to the RPD.

10. The RPD shall use the rank lists from each interview group and initial ranking to determine a final resident ordinal ranking using a numeric average of scores.

11. The Chief Pharmacy Officer shall review and approve the resident candidate ranking for all residency programs prior to submission.

12. The RPD shall submit the approved rank list to ASHP Resident Matching Program.

13. If the program does not match all positions, the RPD and designated interviewers will use the resources of the National Matching Service to identify candidates and interview them by telephone or video-link if they are not local. The interview team will then rank candidates, and develop an ordinal ranking list. This list will be reviewed by the Chief Pharmacy Officer prior to submission by the RPD to Phase II of the National Matching Service Resident Matching Program. If unfilled positions still exist after Phase II is complete, the program will again use the resources of the National Matching Service to identify candidates and interview them by telephone or video-link if they are not local. The interview team will then rank candidates and offer position(s) to the top candidate(s) verbally.

14. Once residents are selected through the match, they will receive an offer letter citing the requirements of the program, salary and start date. Residents must pass a drug test and background check, and each must sign and return the offer letter. Prior to starting the residency, the resident must provide proof they are legally able to work in the state of Utah, a full or temporary Utah license, and for PGY2 residents, proof of graduation from PGY1 residency.

15. University of Utah Health PGY1 residents will receive guidance regarding the early commit process during residency orientation. Residents are **not guaranteed** an early commitment to a PGY2 program. Residents must make satisfactory progress in the PGY1 program and express interest to the PGY2 RPD by November 10 in order to be considered. The resident must then submit a letter of intent and CV to the PGY2 RPD to be considered. Each PGY2 program will use a standardized approach to assessing applications and interviewing each candidate for early commitment. Residents who are not candidates for early commit are encouraged to apply through the National Matching Service.

Diversity, Equity & Inclusion Statement

The University of Utah Health Department of Pharmacy Services is committed to creating an inclusive learning and working environment and values diversity in all forms. We value the ongoing development of inclusive environments for students, residents, preceptors, and staff to strengthen our organization. We recognize the importance of respecting individual expressions and fostering safe spaces to promote growth in diversity, inclusion, and equity. We believe a diverse pharmacy community will enhance our professional and personal interactions in providing high quality care to all patients.

General Information

1. The RPD shall serve as program advisor for each of the residents and will guide the resident in meeting the requirements for successful completion of the residency. Each

program may also designate a coordinator to serve as a secondary advisor.

2. The resident shall meet with the RPD at the beginning of the program to evaluate their skills and knowledge and to develop an individualized plan based on the resident's previous preparation and professional practice goals.

    a. The evaluation and planning process shall be documented in the PharmAcademic Resident Development Plan using the Resident Self-Evaluation and Planning Form.

    b. The resident and RPD will develop a customized residency program plan for each resident to accomplish the specific program goals taking into account the resident's goals, interests, strengths, weaknesses, and opportunities available within University of Utah Health.

    c. The Resident Self-Evaluation and Planning Form will be used to develop each resident's schedule of rotations.

    d. Once residency rotations have been assigned, the resident may request a change in assigned rotations. Requests will be accommodated whenever possible and appropriate for their training plan.

3. A copy of the Residency Manual shall be provided electronically to each resident outlining the requirements of the residency program.

    a. Individual programs may also provide each resident with a program-specific appendix to supplement the common manual with information pertinent to that program.
    b. Residents shall make themselves knowledgeable of all program requirements.
    c. Residents shall make themselves aware of important dates and deadlines set forth and identified in the program manual and appendices.

4. Orientation to University of Utah Health and to the Department of Pharmacy Services will take place during the first weeks of the program; however, orientation and skills development will continue on an as-needed basis.

5. Residents are classified as regular, full-time, exempt employees of University of Utah Health (UUH) and are eligible for benefits as such. (See Appendix A for the Resident Job Description.)

6. Vacation Leave – PTO-Scheduled

    b. Residents accrue 18 days paid time off **(PTO)** to cover vacation and sick leave during the residency year. To ensure the quality of the residency rotations, vacation leave is limited to 10 days over the course of the year and 2 days per 4 week rotation experience. PTO remaining at the end of the residency will be cashed out or will be maintained if the resident accepts a position with UUH. <u>This includes leave time granted for interviewing for positions and educational meetings</u>

that are **not** sponsored by the program. Vacation requests must be submitted in writing, on a Leave Request form, to the RPD and Manager of record. (Huntsman and University Hospital requests must be in StaffReady.) The resident will first discuss the request with the affected rotation's preceptor to ensure that rotation objectives can be met, and the resident will obtain the consenting preceptor's signature on the Leave Request form **prior** to submitting it to the RPD. Vacation days should be limited to a maximum of two days per rotation. If more time off is required, the RPD must be informed to ensure rotation objectives can be met. The rotation may need to be extended if rotation objectives cannot be met.

7. Holidays and Holiday Leave

   a. Residents accrue up to 10 paid holidays as full-time exempt employees during the year in addition to PTO. Residents may count a worked holiday as part of service commitment if they have worked their regular commitment during the remaining weekdays and used the holiday from their holiday bank - making the worked holiday truly an extra shift. If the resident has worked less than a 40-hour commitment between the 8 hours of holiday pay (16 hours during the week of Thanksgiving), staffing, and regular rotation attendance, the resident must discuss PTO options with their RPD.

   b. Benefit-eligible UUH employees may "bank" time worked on a company-paid holiday for use at a later time. However, the shift work on that holiday cannot count as a required shift or be paid as ECS if the holiday is banked. The banked holiday must be used by April 1st if earned in the first 6 months, or by when residency employment ends.

   c. Residents are required to be available to staff Thanksgiving, Christmas OR New Year's holidays as a 2-day major holiday coverage commitment. For example, the resident will work Thanksgiving and the day after, or Christmas Eve and Christmas Day, or New Year's Eve and Day. Residents are also required to work two minor holidays including Martin Luther King, Jr. Day, Presidents' Day, Memorial Day, 4th of July, Pioneer Day, or Labor Day. Specific assignments shall be made in conjunction with the pharmacist scheduling manager. (Requirements vary by program for holidays.) Of note, Christmas Eve and New Year's Eve are not University Holidays and cannot count toward required staffing shifts. The resident will not attend rotation that day & will instead staff the area as part of their regular residency hours.

   d. Residents shall discuss holiday service requirements with the affected rotation's preceptor as early as possible.

   e. Residents may participate in staffing of shifts for other holidays consistent with the standards applied to regular staff.

8. Sick Leave – PTO-Unscheduled

   a. Residents are afforded sick leave as a part of the PTO accruals.

b. When the resident is unable to work as a result of illness, either on their rotation assignment or staffing assignment, the resident shall immediately notify their rotation preceptor or scheduling manager for staffing shifts, rotation days or project days. The resident shall subsequently and additionally notify the RPD of their absence from rotation, project days, or staffing shifts, and submit the sick day request as PTO-unscheduled (PTO-U) in the appropriate format (e.g., payroll exception form).

c. The RPD will assess progress in the program when a resident reaches 5 days of PTO-U during the program year to determine if the resident is on track for graduation. The RPD will meet with the resident to discuss absences and review a plan for successful completion of residency.

9. Fitness for Duty

a. Residents will be sent home if an RPD, area manager or preceptor determines the resident is unfit for duty. Examples include excessive fatigue, chemical impairment, illness, emotional distress, or other issues affecting performance.

b. Residents will be referred to organizational resources as appropriate such as Employee Assistance Program, Resiliency Center, Employee Health, or Office of Equal Opportunity.

c. Residents will take PTO-U for the hours missed.

10. Excessive Absence During the Program

a. A preceptor or RPD may determine that absences from the rotation or the program are excessive when there is the potential for a resident to not complete program expectations or requirements. Excessive absence may be due to illness or other factors. When situations such as these occur, the resident must work closely with the preceptor and RPD to make arrangements to meet the requirements.

b. Despite all arrangements, a situation may arise where the resident has not completed rotation and program requirements. This determination shall be made by the RPD in consultation with rotation preceptors. An alternate written plan will be developed to enable the resident to successfully complete the program requirements if possible. Consultation with Human Resources may be necessary to determine if a medical leave of absence is needed. The residency year may be extended for no more than 3 months to allow completion of program requirements.

c. If the resident fails to complete the plan, disciplinary action will be considered. Residents unable to complete program requirements according to the written plan and appropriate extended timeframe will not graduate from the program. Once the annual salary has been paid out at the amount offered in the offer letter, the time

spent in completing requirements will then be unpaid.

d. Graduation from a PGY1 program is required prior to being eligible for PGY2 status. If a resident is in a 2-year program or has early committed to a PGY2 program at UUH, they must complete all requirements of the the PGY1 program first.

11. Disciplinary Action and Dismissal

a. Disciplinary actions or dismissal from the program are actions that are considered when residents do not meet department, program or rotation expectations. Residents are informed of program requirements, expectations, and deadlines. Rotation expectations are communicated by the preceptor at the beginning of and throughout each rotation. The requirements of each rotation are documented in learning experience description.

b. When problems related to performance, professionalism, behavior or knowledge arise, the preceptors will counsel the resident on how to correct the problem. If the issues are not resolved, the ongoing concern will be clearly documented in PharmAcademic and elevated to the RPD with an in-person meeting that includes the resident. The Program Director may consult with the Residency Advisory Committee **(RAC)** regarding appropriate action.

c. The RPD will discuss the issues with the resident and preceptors as appropriate. The RPD, preceptor(s), and resident will work together to create a clear corrective action plan in writing. The RPD, relevant preceptors and resident will meet regularly to assess progress on the written plan and provide feedback to the resident on their progress. Failure to make adequate progress will be documented on the plan, and adjustments to the plan made in writing.

d. When disciplinary action is indicated, the RPD (or rotation preceptor in conjunction with the RPD) will take the appropriate action based on the situation and circumstances (See also University Policy 5-111: Corrective Action and Termination Policy for Staff Employees).

e. When dismissal from the program may be indicated, the RPD will make recommendations to RAC. RAC will make the final decision concerning dismissal from the program.

f. Dismissal from the program may occur with consultation with Human Resources during the resident's first 6 months of employment (probationary term). Problems discovered in the 4th or 5th month of the residency may result in a 3-month extension of the probationary term and will be negotiated with Human Resources by the RPD and the location manager. After this time, the resident will go through progressive discipline and be terminated from employment.

12. Pharmacist Licensure in Utah

a. All residents are required to be eligible to work in the United States prior to their first day of residency.

b. Residents must have either a full or temporary Utah license **2 weeks prior** to the first day of residency.

c. Residents must be fully licensed in the state of Utah to practice as a pharmacist by **September 30th**. If a resident fails to obtain full pharmacist licensure in the state of Utah by September 30th, they will be released from the program. The Residency Advisory Committee will review the circumstances of each case of non-licensure and may approve an extension for circumstances outside of the resident's control.

13. Residency Program Certificate

a. Upon successful completion of all program requirements and compliance with all conditions of the residency program, the resident shall be awarded a certificate indicating successful completion of the residency for the appropriate program. The language on the certificate will match ASHP's requirements for certification of graduation including the official name of the residency program (e.g., "Postgraduate Year One in Pharmacy" or "Postgraduate Year Two in Critical Care Pharmacy.")

b. Residents that fail to complete program requirements and comply with all conditions of the residency program shall not be awarded a certificate of completion.

c. Certificates will only be awarded to residents who have completed the following:

i. Completed 85% or more of objectives as achieved for residency (**ACHR**) and all other goals and objectives marked as "satisfactory progress" or "achieved" in PharmAcademic.
   a. All PGY1 and direct patient care PGY2 residents are expected to achieve all clinical goals for residency prior to graduation (e.g., R1.1 objectives).
ii. Completed all required activities, projects, and presentations for residency.
iii. Attended all meetings as required by the program.
iv. Turned in a formal written manuscript of their year-long project to the RPD and project mentor(s) who deem the document acceptable for submission to a journal.
v. Turned in a completed, hyperlinked electronic e-portfolio of all their written projects, presentations, rotation overviews, and readings as appropriate.
vi. Completed other program-specific requirements as outlined in the final graduation checklist.
vii. Signed the program's residency completion checklist.

Residency Advisory Committee: 2021-2022

Russell Benefield, PharmD, BCPS-AQID	Clinical Pharmacist, Infectious Disease PGY2 Director, Infectious Disease
Dave Young, PharmD	Professor, Clinical PGY2 Director, Internal Medicine
Erin Fox, PharmD, BCPS, FASHP	Interim Chief Pharmacy Officer Senior Director, Drug Information and Support Svc PGY2 Director, Medication Use Safety & Policy
Karen Gunning, PharmD, BCACP, BCPS	Professor, Clinical PGY2 Director, Ambulatory Care
Dallas Moore, PharmD, MS	Director, Pharmacy Automation and Informatics PGY2 Director, Pharmacy Informatics
Shantel Mullin, PharmD, BCPS	Director, Quality, Safety and Training PGY1 Pharmacy Residency Director
Kathryn Disney, PharmD, MS, BCPS, BCCCP	Clinical Pharmacist, Critical Care PGY2 Director, Critical Care
Stephanie Sanders, PharmD, BCOP PGY2 Director, Oncology	Clinical Pharmacist, Oncology & Critical Care
Cole Sloan, PharmD, BCPS	Clinical Pharmacist, Emergency Medicine PGY2 Director, Emergency Medicine
Lonnie Smith, PharmD	Manager, Solid Organ Transplant PGY2 Director, Solid Organ Transplantation
Teshia Sorensen, PharmD, BCPS, BCCP	Clinical Pharmacist, Cardiology Services PGY2 Director, Cardiology
Kavish Choudhary, PharmD, FASHP	Interim Chief Pharmacy Officer, Pharmacy Services PGY1/PGY2 Director, HSPAL
Nancy Nickman, PhD	Pharmacotherapy Faculty (Ex Officio)

Residency Program Coordinators

Ashley Bowden, PharmD, BCPS (HSPAL)
Adrian Carlson, PharmD (Solid Organ Transplantation)
Ashley Crosby, PharmD, BCPS (PGY1 Pharmacy–Track A)
John Dechand, PharmD, BCCP (Cardiology)
Sara DeHoll, PharmD, BCOP (Oncology)
Kristine Gray, PharmD, BCPS (Internal Medicine)
Nick Cox, PharmD, BCACP (PGY1 Pharmacy– Track B)

Erin Lingenfelter, PharmD (Emergency Medicine)
Nicholas Link, PharmD (Informatics)
Ashley Ryther, PharmD, BCPS (HSPAL)
Jennifer Wiederrich, PharmD, BCPS (Internal Medicine)
Brianne Wolfe, PharmD, BCCCP (Critical Care)

RAC Subcommittee Chairs (attend only when issues arise related to committees):

Shantel Mullin (Preceptor Development and Teaching Certificate)
Ashley Ryther (Recruiting)
Kristine Gray (Orientation and Assessment)
Erin Fox (Research Oversight)

Research Subcommittees are appointed annually by the following Chairs and generally consist of the program directors as well as interested program preceptors.

Shantel Mullin – PGY1 Pharmacy Residents
Erin Fox – Med Use Safety & Policy, HSPAL, Informatics
Stephanie Sanders – Clinical PGY2 programs

Service Commitment

1. Residents are required to provide staffing support, within the department, as part of their program and stipend. The service commitment is **four full shifts** (no less than 32 hours) per month for most programs. Training for staffing shall begin in July of the residency year and time requirements may exceed 32 hours per month in staffing roles until training is completed. Up to 4 training/shadow shifts can count toward the total of 48 required shifts, though additional training shifts may be required to ensure competency before independently staffing the assigned location.

2. Scheduling of service commitment will be made based on input from each resident. Residents may work 4, 8, 12 or 16 hour shifts as assigned on the area staffing schedule or they may pick up open shifts once the schedule is published. For example, shifts may be completed on weekday evenings or weekends in central or decentralized locations. The resident may only leave a rotation site early for a required or other extra shift if the rotation preceptor approves this prior to the resident signing up for the shift. Residents must complete all shifts as part of a team rotation schedule for the full residency year (e.g., every 3rd weekend through June plus holiday shifts for Track A or on weekend a month for Track B). PGY2 programs specify requirements in each program appendix.

3. **Duty Hours:** Work Hours are defined as all clinical and academic activities related to the residency program. These can include, but are not limited to, patient care, administrative duties, and scheduled academic activities such as conferences and lectures. Work hours **do** include internal moonlighting shifts worked. Work hours do not include time spent away from the work site (i.e. at home) for reading and preparation or time traveling to conferences. (Moonlighting outside of the organization is **not allowed**.)

   Work hours must be limited to 80 hours per week averaged over a 4-week period inclusive of all in-house activities and all extra staffing shifts (i.e. moonlighting shifts). Extra paid staffing shifts may be available for residents to select, but these are in addition to their required staffing shifts. These extra shifts must not interfere with the ability of the resident to achieve the educational goals and objectives of the residency program. Residents must be given one day in seven free from all work-related responsibilities averaged over a 4-week period. One day is defined a 24-hour period free from all clinical, educational, and administrative activities.

   Adequate time for rest and personal activities will be provided. This should consist of at least 10 hours between all daily duty periods averaged over 1 week. Residents must have 8 hours between scheduled duty periods. Residents attest to their hours by signing their electronic time card each pay period.

   ASHP's duty hour policy will be followed: https://www.ashp.org/-/media/assets/professional-development/residencies/docs/duty-hour-requirements.pdf.

   Extra staffing (i.e. moonlighting) hours must be documented by residents as exempt clinical shifts (ECS shifts) on their exception forms, and they must clock in and out in Kronos for all regular and ECS staffing shifts so the shifts can be tracked along with all

other residency hours. A designated RPD or manager will assess compliance with the duty hours and the following staffing rules for required shifts and moonlighting shifts (i.e. ECS).

a. No “double-doubles” (i.e. 16 hour shifts 2 days in a row including rotation hours)
b. Not more than 8 total shifts in a Saturday through Friday work week (including rotation days & required shifts)
c. No more than 12 consecutive days in a row (e.g., day 13 should be off)
d. No more than 80 hours per work week

4. Opportunities for service are chosen for the resident by the program director and may include on-call, staffing shifts on weekends, or swing shifts as appropriate for the resident and training program needs. If the resident elects to sign up for a swing shift, he or she must obtain approval to leave their rotation site early to work the shift. The rotation site takes precedence over signing up for the required shift. If the preceptor states they would prefer the resident NOT cover swings during that rotation, the resident should select weekend shifts to avoid leaving the rotation early that month. This may be particularly relevant on certain clinical rotations.

5. Residents are expected to read and prepare for rotations and work on their projects on evenings and weekends as part of their learning process. Time spent in the hospital on off-hours working on projects or catching up on rotation requirements may not be used for compensation time or for required shifts. Time “on the clock” is subject to duty-hour limits.

Rotation Guidelines

1. The resident shall provide complete pharmacy services in coordination and cooperation with departmental professional and support staff, consistent with departmental policies and procedures for operations and clinical practice, meeting all the requirements and obligations of pharmacists on staff.

2. The resident shall actively participate in rotation activities, including: team meetings, rounds, and other interdisciplinary conferences that occur on the services of their rotations. The rotation preceptor shall be responsible to identify these opportunities and to commit the resident to effectively participate.

3. The resident shall identify therapeutic issues and problems and shall develop and present therapeutic recommendations. They will also present in-services to the medical, nursing, and pharmacy staff addressing those issues as needed.

    a. The resident is encouraged to seek opportunities to educate other ancillary health care practitioners such as physician's assistants, nurse practitioners, and physical therapists, etc., on subjects relating to pharmacology, therapeutics and medication use.

4. The resident shall provide instruction for Doctor of Pharmacy students or other residents on clinical or administrative clerkships, under the supervision and guidance of their rotation preceptor.

5. Non-University of Utah Health Rotations (N-UUH):

    a. Residents shall be allowed to obtain practice experience in N-UUH rotations as pre-approved by the RPD and Chief Pharmacy Officer.
    b. Residents shall not be permitted more than four weeks in an N-UUH site rotation during the residency training program.
    c. PGY1 residents are encouraged to take UUH rotations whenever possible to fulfill their learning objectives as N-UUH rotations do not count toward CMS site reimbursement.

6. The residency programs at University of Utah Health take a holistic approach to post-graduate training. The expectation is that an interdisciplinary team philosophy will be used, and the team member with the greatest experience will provide leadership and mentorship to other team members.

7. The resident may be required to staff their current or past rotation area alone during regular rotation hours following orientation to the service in certain situations. These situations may include preceptor illness or when preparation of the schedule has exhausted all other options for finding competent coverage. In extreme emergencies, residents may be pulled from their rotation site to cover other staffing locations due to acute illness or natural disaster and when all other options have been exhausted to cover these open shifts with other regular staff. Both the RPD and resident will be contacted to

discuss the staffing situation prior to the shift being covered. This is a program and rotation expectation and will NOT count toward additional service commitment hours as it occurs during the regular rotation work week and is not considered extra hours of work.

Project

1. The resident shall develop and complete a residency project with the guidance and supervision of appropriate preceptors.

2. The resident is responsible for selecting an individual to serve as primary project advisor.

3. The project advisor(s) shall be responsible to:

    a. Provide guidance to the resident in designing, performing, and documenting the outcomes of the project.

    b. Oversee the development of the project proposal.

    c. Meet with the resident at least bi-monthly to discuss the progress and deliverables on the project.

    d. Support the resident during presentation of the proposal to the RAC.

    e. Provide technical expertise and advice to the resident.

    f. Provide editorial assistance in developing the platform presentation for Mountain States Residents Conference and the final project manuscript.

    g. Review the final report and notify the RPD when the project is complete.

4. The project must be approved by the Residency Advisory Committee. The format for the proposal to RAC will follow the current requirements for submission to IRB.

5. The resident shall meet the following project deadlines:

    a. July — Identification of project idea & advisor(s)

    b. August — Development of project proposal

    c. August-September — Present project to the appropriate Research Subcommittee of the Residency Advisory Committee

    d. September-October — Final proposal submitted to RPD, Research Subcommittee Chair, and Institutional Review Board if required.

    b. October-November — Submit abstract to Vizient-UHC for poster presentation in December (required for Teaching Certificate, may be optional

		for other residents depending on program)
c.	February	Mountain States Conference (or appropriate conference as approved by RAC) abstract approved by project advisor(s) and RPD and submitted to Conference before the deadline
g.	April	Draft of project Mountain States Conference slides and handout to project preceptor(s) and RPD
h.	April	Practice presentations for Mountain States Conference and submit slides to the Conference by the deadline
i.	May	Present project at Mountain States Conference
j.	June	Due date (approximate) for submission of case studies and posters for next ASHP Midyear Clinical Meeting (Optional, but highly recommended)
k.	June	Final Summary Report (manuscript format) of project to RPD and project advisor(s) for approval. For projects with significant effects on exceptional patient experience, quality or financial impact, the resident must send approved project summary to the chair of RAC and the Chief Pharmacy Officer for review.

6 The resident is responsible to pursue any necessary funding for their residency project. Funds will be used to offset costs of the project and to support travel to conferences where the material will be presented.

7. Funds generated for residency projects shall be deposited into the department's research account and shall be used to offset costs of the residency project.

8. A final written report of the residency project shall be submitted to the RPD as a requirement for successful completion of the residency. The report shall be written using format and style consistent with publication in a professional journal, including project subject, background, methods, results, and conclusions. Residents will be ready to submit their project manuscript for publication in a professional journal. (Some programs may require the manuscript be submitted to a journal before the residency certificate is bestowed.)

Required Format for RAC Proposal:

Protocol Summary

Version: [version date]

[Study Title]

Principal Investigator
[Principal Investigator Name]
[PI Address]
[PI Phone Number]
[PI E-mail Address]

Please list all co-investigators with their contact information
Co-Investigator(s)
[Co-Investigator Name]
[Co-Investigator Address]
[Co-Investigator Phone Number]
[Co-Investigator E-mail Address(es)]

Faculty Sponsor (if applicable)
[Faculty Sponsor Name]
[Faculty Sponsor Address]
[Faculty Sponsor Phone Number]
[Faculty Sponsor E-mail Address]

DIRECTIONS:

- *Replace bracketed items on the title page, such as "[Study Title]" with the requested information. Please replace "[version date]" with a date.*
- *Delete all directions written in italics, such as this section.*
- *Read guidelines for each section, complete as applicable for your project and then delete the template guidelines.*

Your summary should be able to answer the following three questions regarding scholarly merit of the proposed activity:

1. *Will the research design yield valid results?*
2. *Does the research utilize acceptable practice for the discipline?*
3. *Does/Do the investigator(s) possess adequate qualifications to conduct the research?*

BACKGROUND AND INTRODUCTION: Identify the research area being studied and provide a review of the literature that provides the basis for understanding the objectives of the study. This review should be written such that scientists and clinicians outside the investigator's area of expertise can understand the issues involved. Any information about previous research related to this study involving animals and/or humans should be summarized. Include studies on pregnant animals if the research is conducted on pregnant women, fetuses, or neonates.

OBJECTIVES: The objectives should be stated in such a way that the reader can determine the appropriateness of the study design below. If appropriate, state the specific hypotheses being tested and/or study aims.

RESEARCH QUESTION: State the question you hope to answer with your project.

PARTICIPANT SELECTION CRITERIA: Participant-entry criteria should be as detailed as necessary to define the patient population under study and, for clinical studies, to reduce confounding treatments or diseases. Precise criteria for age, gender, or any other factors (e.g., in a clinical study: diagnoses, extremes in signs or symptoms, etc.) should be included. Specific exclusion criteria should be listed which could interfere with the study or which place participants at risk during the study.

DESIGN: A simple statement of the design methodology proposed to test your hypothesis(es) should be included. Randomization and control methods should be stated. Of primary importance is clearly showing how the trial design will collect the study data and lead to the analysis and interpretation proposed. Any interim analysis or criteria for stopping a clinical trial should be stated. For studies not proposing experimental design include detail about the scientific methods to be employed.

STUDY PROCEDURES: This section of the protocol should state both the chronological flow of the study and the procedures/activities that the participants must undergo. The investigational activities, treatments, or procedures must be clearly detailed as to how and when they will be performed. For clinical studies, a distinction should be made between the procedures for treatment evaluation versus procedures for safety evaluation. Treatment endpoints must be defined as well as interim procedures for dealing with adverse events. Schematic diagrams may be helpful for understanding the flow of a study.

> **Standard of Care vs. Research-Related Procedures:** Please separate and explain what proposed procedures for this study are considered standard of care and which ones are strictly research-related. *Delete this sub-section if it does not apply to your project.*
>
> **Data Safety and Monitoring:** All moderate risk studies require a data safety and monitoring plan, committee, or board. The information provided to the IRB should describe the process and mechanisms in place for assuring the safety of research participants and the oversight of data integrity. *You may describe the plan in this sub-section or attach a separate document outlining the DSMB/DSMC to the documents and attachments page of the application under Protocol Summary. Please refer to the IRB website for more information regarding data safety and monitoring requirements under Guidelines. Delete this sub-section if it does not apply to your project.*

STATISTICAL METHODS, DATA ANALYSIS AND INTERPRETATION: The anticipated methods to be used for analysis and interpretation of the data should be stated. Naturally, these methods must compliment the design of the trial and the nature of the data which are being collected. The factors in the trial that determine the proposed sample size (e.g. power) should be stated.

ADMINISTRATIVE RESPONSIBILITIES:

> **Study Resources:** Specify the resources available to conduct the research including qualified personnel, equipment, space, and what facilities will be involved. Include an explanation of the methods for maintaining confidentiality of the study data. *All investigators must provide this information.*
>
> **Recruitment:** Describe methods of participant recruitment which will be used to recruit participants such as newspaper/internet advertisements or flyers. *Please note that the University of Utah IRB does not allow cold-calling as a method of recruitment. All recruitment materials must be attached to the documents and attachments page in the application. If chart review will be involved as a method of recruitment, you must complete a request for waiver of authorization and consent in the application. Delete this sub-section if it does not apply to your project.*
>
> **Control of Investigational Devices/Drugs:** If this project involves an investigational drug or device please provide a plan as to how you will control, store, and dispense investigational drugs/devices to ensure they are only used by the qualified investigator(s) for this study and the participants enrolled in this research project. *Delete this sub-section if it does not apply to your project.*
>
> **Communication Plans for Multi-Center Studies (i.e. multiple sites around the nation):** If you are the lead investigator for this study, or the University of Utah is the lead site for this study, please describe the

management and communication among sites of information obtained in this research that may be relevant to the protection of research participants, such as:

- Unanticipated problems involving risks to participants or others
- Interim results
- Protocol modifications

Please attach an IRB approval or signed letter of support from each participating site to the documents and attachments page of the application under Other Documents. Delete this sub-section if it does not apply to your project. (Multisite studies led by a resident require approval from the Chief Pharmacy Officer.)

Participating Sites outside the University of Utah (i.e. multiple sites around the city or state): This section should discuss which other institutions are participating in the study for which you, as the PI, are responsible. Please describe the procedures, provisions and resources in place at the participating institutions to protect the safety of participants, and how unanticipated problems will be communicated to the PI and the University of Utah IRB. If the participating site is not adequately equipped to handle safety concerns, please explain the procedures and plan in place for the PI to respond to any such occurrences. *Please attach an IRB approval or signed letter of support from each participating site to the documents and attachments page of the application under Other Documents. Delete this sub-section if it does not apply to your project.*

PROPOSED TIMELINE FOR PROJECT: (specific to RAC proposal)

ROLE OF RESIDENT IN COMPLETING THE PROJECT: (specific to RAC proposal)

JOURNAL PRE-SELECTED FOR SUBMISSION: (specific to RAC proposal)

REFERENCES: Citations from the literature should be included in the Background/Introduction section above and the references listed here.

APPENDICES: Data collection forms and survey tools must be included as appendices.

Presentations

1. The resident shall participate in departmental staff development programs as directed by the RPD.

2. Residents shall prepare and deliver a minimum of four presentations under the direction of the RPD and designees. The two presentations required of all residents include an ACPE accredited continuing education (C.E.) presentation and a platform presentation of the resident's project. The four required presentations for PGY1 Pharmacy residents are listed below. See each PGY2 program appendix for program-specific presentation requirements.

    A. A formal, academic seminar to the Department of Pharmacy Services staff.

    B. An American Council of Pharmaceutical Education (ACPE)-approved, presentation developed and presented for area pharmacists, pharmacy students, and technicians on a topic that is of current interest to pharmacy practitioners. The continuing education presentation is subject to the guidelines provided by ACPE and USHP, and must include an evaluation of available literature.

    C. The residency project presentation given at the Mountain States Residency Conference (or other approved conference) with practice sessions presented to the staff preceding the Conference.

    D. Facilitation of 4 recitation sections or OSCEs at the University of Utah College of Pharmacy, with approval by the resident's RPD and the Course Coordinator at the College.

3. The following are the goals for each of the four PGY1 presentations:

A. Formal, academic seminar to the pharmacy staff. (The RPD for each program will provide additional goals and requirements for each presentation replacing the seminar requirement such as pro/con debates.)

Goal 1 – Demonstrate the ability to verbally present a practice controversy to peers in 30 to **35 minutes**. The primary focus of clinical residents will be to identify the clinical dilemma/controversy and related literature, orient the audience to where these data fit in clinical practice, present data from the literature to answer the clinical question, and then clearly provide guidance to audience members on what to do clinically if faced with this clinical controversy. A Seminar Content Advisor, chosen by the resident and confirmed by the RPD, will serve as the content expert and mentor the resident through this process. (Residents in PGY2 programs may choose to present controversial administrative or technological controversies as approved by their RPD.)

Goal 2 – Demonstrate the ability to appropriately select and evaluate literature. The chosen literature should support or refute the **controversial** issue chosen. A written

evaluation of at least 3 articles using the Seminar Pre-Work handout below will be due to the Content Advisor and RPD **by the last Monday in September**.)

Goal 3 – Prepare and use appropriate visual aids (e.g., PowerPoint) for a small- to medium-sized conference room or virtual platform. All audio/visual content must meet approval of the Presentation Advisor and either the Presentation Coordinator or RPD prior to presenting the seminar. Residents who are not ready to give a clear and accurate presentation to staff on time will have their presentation rescheduled.

Goal 4 – Demonstrate the ability to appropriately answer questions posed by peers.

Goal 5 – Provide clear recommendations to the audience members regarding what they should do if confronted with this clinical scenario in the future. If clear recommendations are not given, the resident will be required to re-evaluate the data and present the seminar a second time in order to complete this residency requirement.

Goal 6 – Demonstrate the ability to present clinically relevant data in a clear, concise manner and demonstrate a high level of professionalism. Lack of clarity in the presentation may result in the resident needing to re-present to a small group of Residency Advisory Committee members.

Goal 7 – Use feedback from the presentation to improve the ACPE presentation.

B. ACPE-approved presentation for pharmacists, pharmacy students, and **technicians.**

Goal 1 – Learn the preparation and procedures required for presenting an ACPE-approved presentation. For example, the presentation must be a full **50 minutes** of contact time, followed by 5-10 minutes for questions.

Goal 2 – Prepare a PowerPoint presentation for a large auditorium or virtual platform with appropriate handouts.

Goal 3 – Demonstrate the ability to review a disease state, established or innovative therapeutic plan, new pharmacologic agent/guideline, or other pharmacy-practice/precepting issue.

Goal 4 – Select and evaluate appropriate **primary and tertiary** literature to support conclusions relevant to the pharmacy practitioner (i.e., pharmacist and technician).

Goal 5 – Provide clear conclusions and information related to the “role of the pharmacist and technician.”

Goal 6 – Improve speaking skills and presentation style as compared with the first seminar presentation to pharmacy staff.

C. Formal platform presentation at the Mountain States Residency Conference

Goal 1 – Clearly and confidently present original research.

Goal 2 – Follow the guidelines established for a formal invited speaking engagement. In this case, follow the guidelines mandated by the Mountain States Conference coordinators.

Goal 3 – Use PowerPoint effectively to make slides using tables, graphs, or imported graphics (referenced).

Goal 4 – Use this presentation as a medium to organize data to be included in the final manuscript, which will be written and submitted for publication in a national peer-reviewed journal and to the RPD.

D. Recitation facilitation or lecture for students at the University of Utah College of Pharmacy (with the approval of the RPD and Teaching Certificate Coach as appropriate). PGY1 residents are responsible for completing 4 recitations during the academic year.

Recitation Goal 1 – Residents will review foundational knowledge of the professionalism, therapeutic, and basic science topics for the day's recitation cases ahead of class.

Recitation Goal 2 – Use facilitation skills and active learning techniques to encourage full participation by every member of the student group.

Recitation Goal 3 – Residents will elicit accurate responses to cases from students without giving away the best responses to the students.

Recitation Goal 4 – Residents will provide evaluations of each student's ability to respond to cases following each recitation section, and provide appropriate feedback to students and the Course Coordinator.

Recitation Goal 5 – PGY1 residents will participate in a minimum of 4 recitations or OSCEs per year in either the spring or the fall with guidance from the recitation section coordinator. Other program residents will participate in recitations as directed by their RPD.

***

For PGY2s presenting a lecture instead of facilitating a recitation, the following are the presentation goals:

Lecture Goal 1 – Provide an appropriate overview of material that is new to a group of pharmacy students.

Lecture Goal 2 – Research the lecture topic in order to become a content expert.

Lecture Goal 3 – Select current primary and tertiary literature to reference for the class.

Lecture Goal 4 – Prepare a handout and other visual aids that are appropriate for pharmacy students.

Lecture Goal 5 – Use active learning techniques to engage students at a higher level in the classroom.

Lecture Goal 6 - Work with the course coordinator/primary instructor to schedule the class and verify that the lecture content is adequate.

Lecture Goal 7 – Write clear and appropriate test questions for the class material presented. (Questions should be submitted with the lecture material for review by the course coordinator and Teaching Certificate Coach as appropriate prior to the presentation of the lecture material in class.)

4. Deadlines:

Seminar: A **seminar** topic and Content Advisor must be selected by August 30th. Objectives, pre-work, and rough draft of slides for the seminar are due **the last Monday in September** to the RPD, Presentations Coordinator, and the Content Advisor. Feedback will be returned to the resident within 5 business days. A final handout and completed draft of slides will be due **14 days prior to the first seminar in the series** to the RPD and Content Advisor.

ACPE-Approved Presentation: A topic and Content Advisor must be selected for the **CE presentation** by the end of July (fall series) or November (spring series). Objectives and other paperwork required for accreditation of the ACPE presentation are due a full **75 days** prior to the first day of the presentation series to the USHP CE Administrator and to the resident's chosen CE Content Advisor. A first draft of all materials for the ACPE-approved presentation (including handout and slides) are due *without fail* to the RPD, Presentations Coordinator and the Content Advisor **65 days** prior to the beginning of the CE series (approximately: PGY2-Aug 30; PGY1-January 7). The resident shall then make improvements based on feedback from the advisor and provide a second draft **45 days** prior to the presentation series to the individuals listed above and to the USHP CE Coordinator. These deadlines must be met to fulfill program requirements. Residents who fail to meet their deadlines will be required to present their seminar or CE in a closed-door session with the RPD and Content Advisor and risk losing CE-accreditation for their presentation.

Recitations/Lectures: The recitation/lecture dates and due dates for materials and test questions will be negotiated with the Course Coordinator. When the lecture topics are selected, the resident must immediately notify the RPD and Presentation Coordinator.

Project Platform Presentation: Mountain States practice sessions will be held starting 3-4 weeks prior to the meeting in order to meet slide submission deadlines. Each resident will practice presenting at least twice to Research Committee members and project advisors.

5. At the end of each presentation, the resident will identify to the audience who his/her

advisor is and thank him/her for his/her effort. CE mentors must sign the conflict of interest statement for USHP in addition to the resident completing their contract.

6. Audience members will complete a standard evaluation for the continuing education presentation and seminar. Failure to achieve satisfactory evaluations, meet the ACPE requirements, or meet deadlines will result in the seminar or continuing education presentation being revised and repeated by the resident. The resident will not receive a certificate of residency completion until all presentation requirements are met.

7. Shortly after the seminar (within 1 week following presentation), the resident and either the RPD or the Content Advisor should meet and discuss how the resident performed, what the resident thought went well and did not go well, how the resident thinks he/she can improve for next time, and any comments on the evaluations that need further discussion.

8. The residents shall attend all seminar and CE sessions, practice sessions, and project presentations as assigned by program and approved by the rotation preceptor. In the event of conflicts with rotation requirements, the resident shall resolve the conflict with the preceptor of the rotation and the RPD. PGY1 residents shall attend a minimum of 3 of their resident colleagues' seminars and 3 CE presentations.

9. Presentation handouts, slides, evaluations, and test questions (if appropriate) shall be included in the Resident's electronic portfolio for all four required presentations.

10. Use of any copyrighted material must be approved. Work with your preceptor(s) to ensure that appropriate steps are being followed.
    - Screenshots of Epic
        - **Any screenshots of Epic used for public-facing communication outside of our institution MUST be approved by Epic.**
            - This includes any presentation outside of our institution.
        - Epic reviews any screenshots submitted for approval to ensure that it complies with the Office of the National Coordinator Communication Rule, follows fair use of copyrighted work, and does not share any proprietary information.
            - Refer to Communications About Epic Software Under the ONC Communications Rule for more information

    To submit a request to use screenshots of Epic for any public-facing communication, review the Guidelines for Public-Facing Communication which can be found on the Epic UserWeb or in the Resident Orientation Folder in the S Drive (S Drive >> hscgroups >> Rx Residents >> Rx Residents >> 2021-21 Residents >> Orientation Documents

SEMINAR EVALUATION FORM

DATE: _____
EVALUATOR: _____
PRESENTER: _____
TITLE: _____

This is a learning experience for both you and the resident. Please provide constructive feedback. "Great Job!" is not constructive feedback.

Evaluation codes: **S = Satisfactory** **NI = Needs Improvement**
Please provide constructive feedback to resident, especially if "NI" is checked

I. PRESENTATION STYLE
The style was conducive to my learning.

Objective	S	NI	Comments
Voice Projection			
Pace			
Lack of Distracting Mannerisms			
Professional Dress			
Eye Contact			

Additional Comments:

II. VISUAL AIDS
The material and techniques used enhanced my comprehension and interest.

Objective	S	NI	Comments
Use of equipment and lighting			
Reasonable amount of slides utilized for the allotted time			
The slides/ handouts enhanced the topic (*e.g.*, through the use of diagrams, figures, tables)			
The number of words per slide allowed easy comprehension for the audience			

Additional Comments:

III. PREPARATION
The presenter was prepared regarding the clinical implications of the topic presented.

Objective	S	NI	Comments
Did you feel the presenter achieved an expert level of knowledge such that information presented was valid?			

Additional Comments:

IV. EFFECTIVENESS OF PRESENTATION

The resident was able to identify the clinical dilemma, orient the audience to where these data fit in clinical practice, present data from the literature to answer the clinical question, and then clearly provide guidance to audience members on what to do clinically if faced with this dilemma.

Objective	S	NI	Comments
Was the clinical dilemma presented clearly at the beginning of the seminar?			
Were the objectives clear, relevant and reflect the content presented?			
Were the objectives effectively addressed by the end of the seminar?			
Was the resident able to appropriately orient the audience as to where this clinical controversy fits in contemporary clinical practice?			
Did the resident effectively use published literature to support/refute what is currently done in contemporary clinical practice?			
Was the resident able to focus the presentation into clear, concise "take-home" points that were easily understood by the audience?			
Were the conclusions reached by the resident credible based on the published data provided?			
Were clear recommendations made regarding what the audience member should do if confronted with this clinical scenario in the future?			**(If these were not given, a recommendation to suggest redoing the seminar is strongly recommended)**
Did the resident enhance your understanding of this clinical dilemma?			

Additional Comments:

V. OVERALL IMPRESSION OF PRESENTER

It is encouraged that ALL attendees provide comments to these questions so that the residents may improve.

Objective	Please provide constructive comments to each question?
How effective was the resident at presenting a seminar that was clear, concise, well-structured, and well-supported by literature?	
What steps do you suggest this presenter take to improve their ability to give an effective seminar?	

Additional Comments: ___ Pass ___Recommend rework and second presentation

Seminar Pre-Work: Complete this form for each study used to prepare your seminar – submit to Seminar Advisor
Questionnaire for Evaluating Primary Literature compiled by Linda S. Tyler, PharmD
Article: _____

Introduction	yes/ no/ partial	Comments
Is the reason for conducting the study discussed?		
Are the study objectives clearly defined?		
Is the null hypothesis clear?		
Methodology	**yes/ no/ partial**	**How might this influence the results or affect the validity of the study?**
Have adequate measures been taken to prevent selection bias?		
• Is the study population adequately defined?		
• How were subjects selected? What are the inclusion criteria? Are the selection procedures clearly defined?		
Case-control: How were cases selected? How were controls selected? Are the controls comparable to the cases? Was bias introduced in the selection process?		
Follow-up/cross-sectional: How was the study population selected? Was bias introduced in the selection process?		
Experimental: Were subjects randomly selected? Did all qualified subjects have an equal chance of being admitted to the study? Are the treatment groups comparable?		
• Are pertinent patient specific data provided? (ie healthy subjects vs patients, sex, age, concurrent disease states, concurrent therapy, race, weight or other pertinent information)		
Have adequate measures been taken to prevent classification bias?		
• Does the study use specific definitions for the study parameters?		
• How were patients classified for entrance into the study? Do they have the disease of interest? (case-control, experimental)		
• Is the severity of disease described?		
• How were the risk factors classified?		
• How were the outcomes classified?		
Have adequate measures been taken to prevent confounding bias?		
• Have measures been taken to prevent competing interventions that may influence the results?		
Are exclusion criteria clearly defined?		
Have adequate measures been taken to prevent information bias?		
• Are data sources used appropriate and likely to have the appropriate information? What is the quality of the data?		
• Have the issues related to recall bias been adequately addressed?		
Have adequate measures been taken to prevent measurement bias?		
• What measures were used to evaluate the outcomes of the study? Are they adequately described?		
• Were the measures used appropriate?		

• Were objective measures used?		
• Are the measures reproducible?		
Were subjects observed for a sufficient length of time?		
Have adequate measures been taken to prevent observer bias?		
• Are the observers specified?		
• Have measures been taken to prevent inter-observer variation?		
Experimental studies:		
• Were subjects randomized? Are randomization procedures appropriate and clearly defined? [Allocation bias]		
• Are the interventions well described?		
• Is the study blinded? Are blinding procedures appropriate?		
• Were specific data on drug regimens given including dose, dosage form, duration of administration, time of dose in relationship to meals?		
• Were all study drugs given in appropriate doses and regimens?		
• Are both groups comparable, and treated in the same manner, except for the intervention?		
• Were the measures adequate to insure or evaluate compliance?		
• Were there any competing therapies that would have influenced the results		
If the study is a crossover trial, was the washout period adequate between interventions?		
Statistical Analyses		
• Have the authors described the statistical analyses to be used in the study?		
• Are the statistical tests appropriate for the type of data (nominal, ordinal, continuous)?		
• Is the sample size determination information included?		
• Have appropriate significance levels been established?		
• Is the power of the study described?		
Based on the methodology, is the study likely to have external validity?		
• Is the study sample representative of the general population?		
• Were the interventions practical? (experimental)		
Results	yes/ no/ partial	Comments
Patients studied		
• Is the number of patients specified?		
• Can all patients be accounted for?		
• Is the number of dropouts given? Are the reasons for dropping out described? (experimental, follow-up)		
• Were sufficient numbers of patients studied?		
• Were patient demographics presented?		

• Do the groups look similar based on demographics?		
Data presentation		
• Are data presented for all measurements specified in the methodology?		
• Are data presented objectively?		
Statistical Analyses		
• Are appropriate descriptive statistics presented? [ie measure of central tendency (median, mean, mode), spread of the data (range), variation in the data (SD)]		
• Are p values and confidence intervals specified? •		
• Are the inferential statistical tests applied appropriately?		
• Are statistical analyses meaningful?		
Discussion/ Conclusions	yes/ no/ partial	Comments
Are the author's conclusions appropriate based on the data presented?		
Are the results statistically significant?		
Are the results clinically significant?		
Does the author discuss objectively the limitations to the study?		
Are the conclusions consistent with the purpose of the study?		
Can the conclusions be extrapolated to the population in general?		
Overall		
Do the title and abstract appropriately reflect the content of the study?		
Does the author cite mostly primary literature? Is the article referenced appropriately?		
Who sponsored the study?		
What is the reputation of the journal? Is it peer reviewed?		
Are there editorials available that discuss the article? (companion editorials or editorials that come out later)		

Summary: Overall assess the study's strengths and weaknesses

Does the study have internal validity?

Does the study have external validity? Is it relevant to your problem/situation/practice

PRESENTATION EVALUATION FORM FOR THE SPRING CE SERIES:

SAMPLE: Speaker Evaluation

University of Utah Resident CE Series

Resident Name Here

"CE TITLE GOES HERE"

---

1. Did the presenter meet the stated educational objectives? (Place Pharmacist Objectives 1st, then Tech Objectives 2nd, clearly delineating which is which.)

a.	Objective #1 written out here.	Yes	No
b.	Objective #2 written out here.	Yes	No
c.	Objective #3 written out here.	Yes	No
d.	Objective #4 written out here.	Yes	No
e.	Objective #5 written out here.	Yes	No

Please rate the following, 1 = very dissatisfied, 5 = very satisfied

2. How satisfied are you with this presentation? 1 2 3 4 5

3. Was the content of this presentation relevant to your area of practice? Yes No

4. How does this topic pertain to your educational goals? _____
_____

5. The speaker was:

a. Interesting	1 2 3 4 5
b. Practical	1 2 3 4 5
c. Answered questions appropriately	1 2 3 4 5
d. Showed mastery of the subject	1 2 3 4 5

6. Please rate the quality of the learning materials. 1 2 3 4 5

7. Please rate the effectiveness of the learning activity. 1 2 3 4 5

8. The presentation was free from bias, promotion, or advertisement? Yes No
If no, please explain:

9. What other topics would you like to see presented in the future? _____

10. Please use the space below to provide any constructive comments about the presenter or the topic presented and if you had any unanswered questions.

Mountain States Conference
Platform Presentation Evaluation Form

Presenter's Name: _____ Abstract #: _____

Presenter's Institution: _____

Evaluator: ☐ Resident ☐ Fellow ☐ Preceptor ☐ RPD ☐ Other: _____

Presentation Feedback	**1=Needs Improvement 5=Excellent**	**Comments**
Presenter demonstrated strong presentation skills: pace and volume were appropriate. Good eye contact. Free of distracting mannerisms.	1 2 3 4 5	
Slides were clear and readable and augmented the presentation well.	1 2 3 4 5	
The presentation was organized and flowed well.	1 2 3 4 5	
Project was clearly described: sufficient background to understand the project; methods clearly described; results presented for each objective; conclusions are clear.	1 2 3 4 5	
Presenter handled questions well.	1 2 3 4 5	
Handout is well organized and contains useful information.	1 2 3 4 5	

Presentation strengths:

One key way to improve presentation:

Project / Research Feedback	**1=Needs Improvement 5=Excellent**	**Comments**
Reasons for selecting project clear; objectives clearly stated.	1 2 3 4 5	
Methods appropriate to answer research question; statistics appropriate for the study design.	1 2 3 4 5	
Results relevant to pharmacy practice.	1 2 3 4 5	
Conclusions match the results presented.	1 2 3 4 5	
Resident's interest and participation in project evident.	1 2 3 4 5	

Please provide additional comments that will help the presenter with future research.

Resident Participation in Conferences and Committees

1. Residents shall meet on a weekly basis for a 1 to 2 hour directed discussion session. Attendance at teaching certificate and leadership conferences is **mandatory** for PGY1 Residents. PGY1 residents must negotiate absences with the program director before the conference begins. All other residents are encouraged to attend to learn and to mentor the PGY1 residents as often as they are able.

2. A schedule of discussion topics shall be developed and a discussion leader shall be assigned. Possible conference topics include teaching and training, leadership, journal club, clinical topics, and time and project management, etc.

3. Residents shall be responsible to participate in or lead discussion and to be prepared by reading background materials and by supplementing with additional readings.

4. PGY1 residents on rotations located on campus are required to attend weekly Resident Conference on Wednesdays at 4:00 p.m. unless dealing with urgent direct patient care issues. If PGY1 residents are unable to attend Conference, they must notify the RPD in advance of conference starting. Residents must notify all preceptors that they are required to attend weekly resident conference prior to starting each rotation.

5. The resident shall attend all departmental staff meetings related to their area of practice. For University Hospital and Huntsman-based residents, staff meetings are held on the fourth Wednesday of the month at 2:00 p.m. unless otherwise directed.

6. Residents are encouraged to participate in department and hospital-based committees and task forces (e.g., Med Error Review Committee, policy task forces, Pharmacy Medication Safety Committee, RAC subcommittees, etc.) Residents wishing to attend a P&T meeting will work with the director of Drug Information Services to develop an item to present for P&T.

7. Residents are encouraged to participate on state and national committees and task forces (i.e., ASHP, Vizient, or USHP). Residents must inform their preceptor of any meeting scheduled during rotation prior to the rotation starting to ensure they can attend.

8. Residents are encouraged to attend RAC meetings as they are able. Meetings are the third Wednesday of each month at 3:00 p.m. Residents will be excused for any discussions involving specific resident performance updates.

Conference Attendance

A Travel Request Form must be submitted and signed by the area manager, director and chief pharmacy officer for all the following conferences at the beginning of the year in order to be eligible to travel. If a travel form is not signed, the resident runs the risk of not being reimbursed for travel. Travel is not guaranteed and is available based on the availability of budgeted travel funds from the organization.

ASHP Midyear Clinical Meeting – attendance will depend on the availability of travel funds
Residents will be given educational leave to attend the meeting virtually to assist with recruiting. Residents shall spend time helping recruit potential candidates for the next residency class, and attend residency showcase. The residents will also attend CE presentations and will give summaries in writing or during Grand Rounds.

Mountain States Residents Conference – required for all residents
The Mountain States Conference for Pharmacy Residents, Fellows and Preceptors will be held each May. Utah residents will present their project to other residents and preceptors during this meeting. Residents are expected to attend assigned presentations, and as many other resident presentations as possible as one of the host organizations.

Other Conferences
PGY2 residents **may** have department funding for one additional specialty conference per year. Other conferences may be attended at the resident's own expense and using accrued vacation time (PTO-S), provided the time away from rotation does not prevent the resident from meeting the required rotation objectives. If the resident has a presentation or poster prepared with a pharmacist preceptor at University of Utah Health, they should complete two steps. First, verify with the RPD and the preceptor of the rotation affected by the conference that the absence is acceptable. Once permission is granted by the preceptor and RPD, complete the Travel Request Form available on the online Pharmacy Help Book and submit the request to their department manager and director for signed approval. Educational leave and/or partial reimbursement for travel and registration may be available from the Pharmacy Department depending on available budget resources.

Professional conduct is expected from all attendees while representing the University of Utah at any conference. Unprofessional conduct during meetings may result in disciplinary action.

Residency Program Portfolio

1. The resident shall maintain a Residency Portfolio electronically which shall be a complete record of the resident's program activities. Residents are to maintain the e-portfolio throughout the year. The e-portfolio shall be submitted to the RPD at the conclusion of the residency training program and shall be a requirement for successful completion of the program.

2. The residency program portfolio shall include the following items:

    a. Completed Resident Self-Evaluation and Planning Form

    b. Residency profile and each customized development plan update

    c. Documentation of activities, projects, presentations, and edited document drafts.

    d. Evaluations that are **NOT** posted on PharmAcademic (e.g. preceptor, learning experience, self-assessments, presentation evaluations, etc.)

    e. A record of all in-services, presentations, and seminars given
        1. Handouts developed
        2. A list of attendees/participants (as available)
        3. Evaluations
        4. Slides

    f. Residency Project
        1. RAC and IRB proposals
        2. Grant/funding proposal
        3. Final manuscript
        5. PHI should **NOT** be posted in the e-portfolio

    g. A list of all seminars/meetings attended
        1. Staff meetings
        2. Committee meetings (including professional associations)
        3. Educational presentations (i.e., grand rounds)
        3. Departmental staff development/pharmacy grand rounds
        4. State/local continuing education
        5. Regional/national meetings
        7. Residency program retreat

    h. A current curriculum vitae

    i. Staffing/PTO/ECS log

3. An electronic file will be kept for each resident and will contain planning forms, presentations, and projects.

Evaluation Guidelines

1. All evaluations shall be timely and documented on appropriate forms in PharmAcademic.

2. If for any reason any additional evaluation is not documented in PharmAcademic, copies of the completed evaluations shall be forwarded to the RPD and uploaded to the resident's PharmAcademic supplemental documents (e.g. student evaluations of the resident.)

3. Evaluation of Resident:

   The performance of the resident shall be based upon the use of predetermined goals and objectives derived from the ASHP Residency Program Design and Conduct: Goals and Objectives.

   a. Rotation: The resident shall be responsible to attend periodic meetings with their rotation preceptor to assess and evaluate their progress in the rotation. The frequency and scheduling of these sessions shall be determined by the rotation preceptor and the resident. At a minimum, an oral mid-rotation evaluation, a final self-evaluation (using the same evaluation form as the preceptor), and final evaluation by the preceptors will be performed.

   If the rotation is team-taught, the preceptors will communicate with each other about the resident's progress, specific recommendations for improvement, and upcoming assignments and special requirements.

   Within seven days after the completion of each rotation, and **preferably on the last day of the rotation,** the preceptor will evaluate the overall performance of the resident using the Summative Evaluation form in PharmAcademic. The evaluation will be reviewed with and signed by the resident, and forwarded to the RPD for co-signature in PharmAcademic.

   c. Quarterly: Quarterly evaluation sessions with the RPD shall be scheduled to assess progress toward meeting global goals and program requirements. The resident shall schedule the sessions to be held in approximately July (baseline), October, January, April and June. This information is documented as part of the Customized Development Plan (CDP).

   d. Failure to demonstrate adequate performance or to meet program deadlines may result in formal disciplinary action including possible dismissal from the residency program.

   e. The Achieved Definition for Residents: The RPD may allow some goals and objectives to be marked as achieved only after completion of specific activities. For example, a resident is unlikely to achieve goals related to writing prior to successfully completing a RAC proposal or Drug Information rotation. The resident appropriately and consistently demonstrates during all learning opportunities, rotations, and throughout the year the following in knowledge, skills and attitudes (as appropriate for each goal evaluated):

Achieved Definition:

1. Competently and safely care for patients at a level acceptable for all pharmacists in the University system.
2. Present patients in a logical and succinct order and understand the priorities of pharmaceutical needs.
3. Serves as a valuable resource for the healthcare team.
4. Gives timely responses that are clear and appropriate for audience understanding.
5. Demonstrates an advanced level of problem solving skills.
6. Demonstrating knowledge, and proper use, of all available resources.
7. Able to autonomously identify and prioritize current tasks as well as upcoming deadlines.
8. Appropriately balance time between work tasks, personal life, projects, and learning opportunities in order to complete all requirements, while continuing to increase knowledge and skills.
9. Through actions demonstrates reliability, responsibility, and trustworthiness on a level that would be desirable for employment.
10. Helps to create an amiable, productive work environment.

4. Evaluation of Preceptor and Learning Experience

Within seven days after the completion of each rotation, and **preferably by the last day of the rotation,** the resident shall complete the Preceptor and Learning Experience Evaluation. This evaluation shall be discussed with the preceptor and submitted to the RPD through PharmAcademic.

5. Evaluation of Program

Residents may bring program issues to the attention of the RPD, the Chief Pharmacy Officer, or to RAC at any time during the year.

Residency Program Retreat:

a. The resident class (including PGY1 and PGY2 residents) shall be responsible to schedule two residency program retreats that shall be held in December and June. The residents, Chief Pharmacy Officer and the Chair of RAC shall attend the retreat.

b. Residents shall develop an agenda for the retreat in cooperation with either the CPO or Chair of RAC. Residents may invite other staff or preceptors as appropriate for receiving feedback.

c. The purpose of the retreat shall be to address the strengths and weaknesses of the programs.

d. The residents shall produce a summary of the proceedings of the retreat that shall include recommendations for change that are identified by the program participants. This will be submitted to RAC for review.

6. The residency program considers a resident's evaluations as privileged information within the program to ensure focused development and feedback for each resident. Use of evaluations as a recruiting tool for future employers or residency/fellowship programs is discouraged. The RPD and preceptors will NOT release copies of a resident’s evaluations to anyone NOT serving as a preceptor for the Program.

Appendix A

Job Description

Department of Pharmacy Services
University of Utah Hospitals and Clinics
University of Utah Health Sciences Center

Pharmacy Resident (7578)

Fair Labor Standards Act (FLSA): Exempt
Revision Date: Mar 04, 2013

Position Summary

This position provides all the functions of a clinical pharmacist as part of a 1-2 year structured training program to develop the resident's skills and knowledge. The residency program director sets the program requirements and is responsible for the overall training program. As part of this training program, the resident will complete a project. Residents are supervised by program preceptors for each of their assigned training rotations.

Essential Functions

- Performs all the essential functions of a Clinical Pharmacist.
  - Solves problems in the medication use process for patients and the organization.
  - Identifies and engages in organizational and department quality improvement activities to improve patient care, medication use process, and pharmacy operations.
  - Educates and trains residents, students, interns, colleagues and other health care professionals as well as supervises technicians, residents, interns, or trainees in their job tasks.
  - Responsible for the medication use process of preparing and dispensing medications following medication use policy and all laws, regulations, and standards applicable to pharmacy practice.
  - Assesses appropriate drug information and literature resources, and provides effective information to varied audiences including patients, other health care professions, and peers.
- Meets all the program requirements of a resident as outlined in the program requirements.
- Conducts a major project.

Knowledge / Skills / Abilities

- Ability to perform the essential functions of the job as outlined above.
- Ability and willingness to train department trainees (e.g. students, interns, and new staff).
- Ability to assess data regarding the patient's status and provide care as described in the department's policies and procedures manual.
- Demonstrated knowledge and skills necessary to provide care appropriate to the age of the patients served on his or her assigned unit.
- Demonstrated knowledge of the principles of life span growth and development and the ability to assess data regarding the patient's status and provide care as described in the department's policies and procedures manual.

Qualifications

Required:

- Graduate of an accredited college of pharmacy in the United States.
- Applications are accepted via PhORCAS until January 1st each year or as otherwise specified by the program director. University Hospitals & Clinics participates in the ASHP Resident Matching Program for the selection of residents into the program. Applications may be accepted in late March for any positions not filled during the matching process.

Required license(s): Current Pharmacist license in the State of Utah (obtain no later than September 30th.)
